

EDITORIAL

Science, at its heart, is the pursuit of understanding the universe and everything within it. But it holds a unique kind of magic - not the kind that conjures spells or creates illusions, but a deeper, more profound magic that shapes our reality in ways both wondrous and transformative. This "magic" of science begins with the simple habit of observation. The world is full of mysteries, from the tiniest atom to the vast expanse of the cosmos. Science invites us to ask questions, to look at the world with curiosity and wonder, and to seek answers based on evidence and reason. It's through this process of inquiry that science reveals its true magic, it unlocks the hidden patterns of nature, uncovering truths that have always been there, waiting to be discovered.

John Jumper, 2024 Chemistry Nobel laureate and the youngest chemistry laureate in over 70 years, in his interview with Adam Smith from Nobel Prize Website, mentioned Richard Hamming's talk "You and Your Research" where he commented "people only work on important things, so they never work on the small things that become important. That's a scary thing." Every single piece of genuine research adds some sort of knowledge to the existing literature.

It is also important that the scientific discoveries have to be analogously communicated to the scientific community with all its technicalities and at the same time to the general public in a more accustomed script without losing the essence of what we have discovered. "Radiance" - the biannual newsletter from Magnetic Resonance Society Kerala (MRSK) would be a platform for all disciples and followers of science including scientists, faculties, researchers and students to communicate the inquisitive language of science in rather plain and untufted words. Radiance is designed to include scientific discoveries crafted in popular science genre, latest advancements in the field of science and technology and news related to MRSK events. We, the editorial of Radiance whole heartedly welcome all those who are in pursuit of knowledge to the first issue of Radiance and sincerley wish 'Radiance' could facilitate your chase seeking ultimate truth!

"In the fields of observation, chance only favours the mind which is prepared..." - Louis Pasteur, 1854.

"Be prepared not just for luck but to watch the wonders of science"

Dr. Sherin Philip (Mar Athanasius College, Kothamangalam)

Chief Editor
